

An example from practice

Weather station ATMOS41, AquaTroll200 "All in one"

Installation and commissioning of two ATMOS stations for measuring 12 meteorological parameters. Installation and commissioning of two AquaTroll200 stations for measuring and recording water level and pressure, conductivity and temperature. Having recording devices with which the data can be downloaded telemetrically. Equipped with mast and solar panel. They are robustly designed for continuous change in harsh climates, meaning there are no moving parts to break. Reliability you can continue to count on.

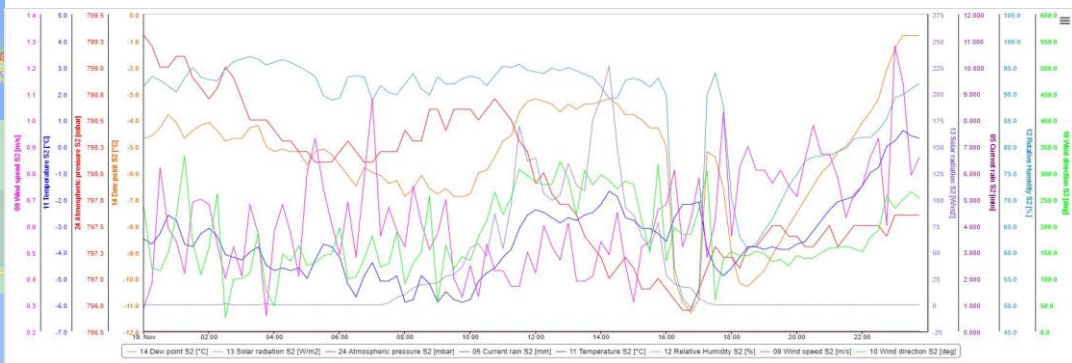

Figure. Describing the data received from the installed weather station

"Delivery and installation of machinery and equipment"
Location: Bulgaria, Burgas, Atanasovo lake.

Administrator:

Black sea salt pans - Burgas

Project: Ditex

- ❖ Parameters:
- ❖ Air temperature
- ❖ Relative humidity
- ❖ Money pressure
- ❖ Barometric pressure
- ❖ Wind speed
- ❖ Wind gust and direction
- ❖ Solar radiation
- ❖ It is raining
- ❖ Lightning strike and distance counter
- ❖ Water pressure
- ❖ Conductivity
- ❖ Water temperature
